

# FOUNDATION FOR CYBER SECURITY

## IDENTIFY

Security Assessment: Establish the Assets you need to protect and Expose your existing potential vulnerabilities.

## PROTECT

Evaluate existing Administrative and Technical controls and realign it to protect the high value assets.

## DETECT

Identify existing technology to identify and detects threats in the real-time.

## RESPOND

Validate existing controls are effective in responding and mitigating the threats in your current environment. Adjust the controls as necessary.

## RECOVER

In the event of an unavoidable situation, backup gets you back up and running while minimizing the cost.

## CYBER AWARENESS

Culture of security mindset is the key to reducing your cyber risks, implement awareness training and security culture
